

New Correctional Facility for Women Construction Update October 28, 2016

We have completed construction weeks #29 & #30 of the new Correctional Facility for Women in Concord; we continue to be on schedule and within budget. As seen in the picture below, the Men's Prison perimeter road on the back of the prison is being re-built as part of the project. Heavy equipment including off-road haulers and excavators have been using this road from time to time and has become very rough, winter binder asphalt will be placed this fall on the new road and then a smooth top coat of asphalt will be placed before final completion next fall.

DOC staff and Gilbane have collaborated on a winter maintenance plan to keep the perimeter road cleared of snow and ice. There will continue to be temporary parking on the rear side of the prison until they finish the underground structures and detention ponds. The project remains on budget and on target for completion.

Jonathan. K. Hanson, Administrator of Logistics, 271-1888
